### **SUPPLEMNTAL EXAMINER'S AMENDMENT**

The previous examiner's amendment send out on Nov. 06, 2000 was vacated because it inadvertently canceled claim 17. This supplemental examiner's answer is to correct this error on the record. Accordingly, claims 1, 3-5, 17, 19-20, 22-24 are allowed and the numbers of claims 19-20 and 22-24 should be renumbered.

#### **Response to the amendment**

The Amendment and response filed on August 29, 2006 have been acknowledged. Claims 1, 20, 21, 22 and 24 have been amended. Claims 2, 6-9 were canceled. Claims 1, 3-5, 10-24 are pending. Claims 10-18 were withdrawn from the consideration. Claims 1, 3-4, 19-24 are considered before the examiner.

The amendment of claims has overcome the outstanding 112 1<sup>st</sup> paragraph rejection. The only remaining issues are double patenting over other copending application. According, the allowance of the current application is processed with approval of the SPE, Bruce Campell of Art Unit 1846.

### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
2. Authorization for this examiner's amendment was given in a telephone interview with Lewis J. Kreisler on October 25, 2005 and November 08, 2006.

The application has been amended as follows:

Claim 1 (current amended). In line 2, please delete "by" and insert --- comprising ---

Claim 22 (current amended). In step b) line 2 after "virus", please insert --- to yield purged bone marrow or peripheral blood cells --- In step d) line 1 after "purged", please delete "hematopoeitic" and insert --- bone marrow or peripheral blood ---

Claim 22 ( reiterated) A method of treating cancer in a mammal comprising:

- a) removing bone marrow or peripheral blood cells from said mammal as a suspension,
- b) incubating said suspension of bone marrow or peripheral blood cells ex

vivo with an effective amount of a vesicular stomatitis virus to yield purged bone marrow or peripheral blood cells,

- c) performing myeloablative treatment on said mammal, and
- d) transplanting into said mammal the purged bone marrow or peripheral blood cells of step b.

Claim 24 (current amended). In line 2 before "bone marrow" please insert --- transplant of --- In line 2 before "comprising" please delete "cell transplant" and insert --- cells --- In line 3 before "incubating" please insert --- purging said bone marrow or peripheral blood stem cells by --- In line 3 before "suspension" please delete "the" and insert --- a --- In line 4 before "cells" please delete "harvested transplant" and insert --- said bone marrow or peripheral blood stem --- In line 5 before "purged" please insert --- resulting ---

Claim 24 (reiterated) A method of treating cancer in a mammal receiving a transplant of bone marrow or peripheral blood stem cells comprising purging said bone marrow or peripheral blood stem cells by incubating a suspension of said bone marrow or peripheral blood stem cells ex vivo with an effective amount of a vesicular stomatitis virus, and administering the resulting purged cells to said mammal.

**Please cancel claims 10-16, 18 and 21.**

**Claims 1, 3-4, 17, 19-20 and 22-24 are allowed.**

1. The following is an examiner's statement of reasons for allowance: the claimed invention is drawn to a method for purging an ex vivo transplantation mixture comprising normal, hematopoietic cells and neoplastic cells by VSV with or without chemotherapeutic agent or myeloablative treatment. Applicants find that treatment of a mixture of acute leukemia cells (OCI/AML3) and normal hematopoietic cells with VSV in the absence of interferon completely ablates the leukemia cells without killing the normal bone marrow cells. Therefore, said treatment saves the normal bone marrow progenitor cells and normal bone marrow cells. Applicants insisted in the response (02/01/2006) that the most closely related art done by applicants themselves published before teaches away from the claimed invention. The previous published result shows that VSBV preferably kill more neoplastic cells only at the presence of a high dose of interferon (1000 U/ml) if the neoplastic cell is deficient in interferon

responsiveness, whereas at the lower dosage of interferon, VSV kills tumor cell as well as normal human cells (Roberts et al. WW 99/18799A1, page 73, Table 26).

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bao Qun Li whose telephone number is 571-272-0904. The examiner can normally be reached on 6:30 am to 3:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bruce Campell can be reached on 571-272-0974. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
